

In today's marine industry, operations are becoming more efficient by capitalizing on increased data transfer and communication between on-shore and vessels. Vessel captains realize the need for enhanced communications, but there are some real challenges to deal with. Electronic communication with shore is often unreliable, and some crews aren't computer savvy, so won't use new systems. Most importantly, their primary focus is running their vessels safely and efficiently, and a complex piece of software that's difficult to use will only distract them and make them frustrated. If you have to use an onboard computer, you need a data management system that is simple, reliable and doesn't get in the way of running the vessel.

Helm Onboard™ was developed with all of these factors in mind. The key is its simplicity. It can be installed with just one click of a mouse and is so easy to use it can be operated by any crew member with no training. The various Helm Onboard™ modules (Captain's Log, Personnel, Maintenance and Purchasing) are designed to communicate with Helm's shore-side modules. Captains and crew can easily

send and receive job related information, keep detailed captain's logs, update vessel information, order parts and supplies and capture all crew payroll details. And if there isn't a connection available to shore, Helm Onboard's standalone database stores all data on the vessel until a reliable, secure connection is found.

Get onboard with the easiest on-vessel software available: Helm Onboard™.

HELM ONBOARD™ MODULES AVAILABLE FOR:

Captain's Log. Track job events, crew onboard, fuel/lube levels, fuel purchases.

Personnel. Record timecards and all payroll details including captain approvals.

Maintenance. Record to-do lists, send/receive work order requests, engine hours.

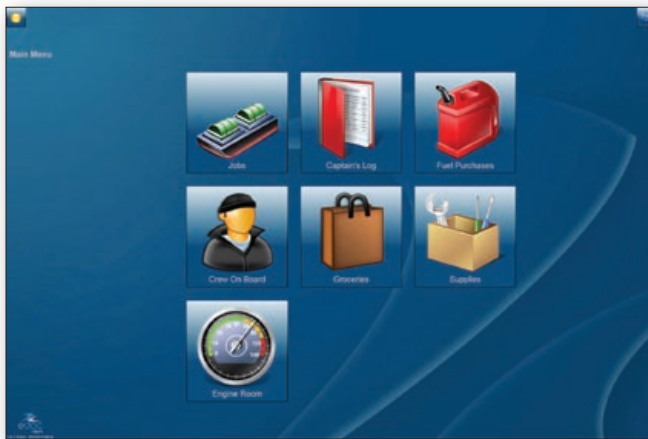

Purchasing. Record and send all requisitions for parts and/or groceries.

BENEFITS:

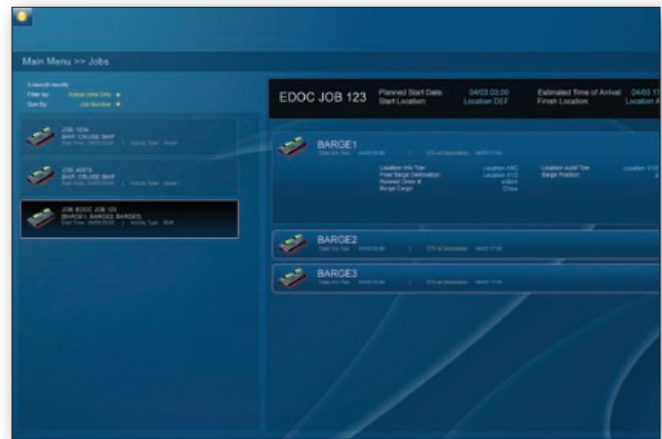

- No training required
- Highly reliable communication with no need for active data connection
- Least cost routing of data through multiple data providers (WiFi, then cellular, then satellite)
- Quick and easy deployment, one click install through email to the vessel
- Simplest interface available in the industry. Designed to be operated with one finger on touch screen or just a mouse

FEATURES:

- Send/Receive job related information
- Keep detailed Captain's Log and send to shore
- Report crew onboard and enter crew payroll time card entries
- Update engine hours, fuel, and lube onboard
- Send grocery orders and parts orders
- Send/Receive maintenance requests
- Receive safety policy documents related to jobs
- Standalone database does not need a live connection to operate
- Automatic synchronization with shore every few minutes
- Least cost routing of data through any data provider

With its simple, intuitive interface, captains and crew can easily navigate Helm Onboard™ with no training.

Users can see all active and upcoming jobs for the vessel, even open documents attached to jobs sent from shore.
